Cheman's Glitters

Whichever field we may be in, if we achieve novelty in our work then fame, high position in the society and everything will follow us. His life is a perfect example of that. Having moulded himself according to the present world speed, he laid his foot steps towards a new technology. In the rapidly changing field of computers, he is heading in the direction of securing a unique place for himself. According to user aspirations, he has developed a unique software for computers and earned an international recognition. He is ***Shaik Cheman****, a former student of JNTU, Kakinada.* – **News Today, Balaji Lake**

With the belief that there is nothing that can't be achieved with sincere effort, he has done research with complete dedication and won the reputation as a scientist. Shaik Cheman is from Vellangi village near Kakinada town. His father Mohiddin used to work as a foreman in the Electricity Board and his mother Fathima Begum is a house wife. Theirs was a middle class family. They are seven children in the family, of whom he is the third child. He is very fond of studies. In the school rankings he always stood first. He has done his primary and high school from Peddapuram, Eleswaram and Tuni. After completing Intermediate he has joined JNTU Kakinada in B.Tech Civil Engineering. During that period Cheman's father used to stay in Samarlakotla - his job location. Cheman daily used to come to Kakinada to study, all the way from Samrlakota on his bicycle. From the year 1983-1987, facing all troubles and with much hard work he could complete his B.Tech. Later he has done M.Tech in Aeronautical Engineering from Anna University. In the process of advanced studies, he overcame lot of troubles and completed his studies.

In Search of Job

After completing studies Cheman started to look out for jobs that are suitable to his talent. In the beginning, he has worked as a scientist in the vibration analysis sub-division of satellites in ISRO. Later he has worked at the Saudi American Bank in Saudi Arabia. But he was chased by a void in his job career. When he looked back, he used to find a big vacuum. He could not

find any satisfactory achievements. He thought he should have his own speciality. With the very thought of it he has resigned from the job.

Messages In All Indian Languages

Has developed Indipad software that sends messages in all Indian languages from one mobile to another mobile. By using this software, one can send messages and e-mails in all Indian languages such as Telugu, Tamil, Bengali, Marathi, Hindi, Kannada, Malayalam etc.,

Internet Search In 125 Languages

By using the software Cheman has developed, one can do search on the Internet in over 125 world languages. Along with e-mail chatting, and commercial advertising one can develop their own website in all those languages without any additional keyboard. One can go to www.simzim.com web-site, select the language of their choice and send messages.

Cryptography

He has developed a cryptography software implementing his newly invented cryptography algorithm for which he was granted a U.S patent in 2006. The software encrypts a password into two cipher text versions and delivers them to the server in two different routes.

Encryption

Converting a password into a secret text is called encryption. Converting that secret text back to the original password is called decryption. Cheman has developed an advanced algorithm for this by which cybercrimes can be prevented.

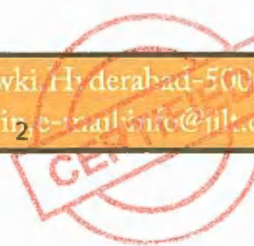

Password Security

Any password is secured by a key which comes from a server, and it can be hacked on its way. The algorithm that Cheman has developed defeats hacking of the key in the middle.

Web Technologies

In Web technologies, he has developed a software that enables everyone to develop their website. These websites can be developed in 125 languages by the people who don't have any knowledge of coding.

With The Aim Of New Inventions

After resigning the job Cheman has decided to invent new things in the field of computers. He has set up all the required facilities and progressed further step by step. With constant research he has achieved his goals within a very short period. At present, Cheman has developed different software for encryption, password security, web technologies and script generation in all world languages. With regard to this, he has obtained five U.S, two Australia, and one Canada patent. Thus, he has secured an international recognition. Presently he resides at Mehdipatnam in Hyderabad and is running his company by name SimZim. In recognition for his effort he was felicitated with an award by an Indian international society for welfare and solidarity. He was also presented an award by Addar Group.

Constant Hard Work

"With constant hard work I have achieved my goals. Through research, I always wanted to introduce new inventions to the society and succeeded in my mission. I will see that the software I have developed will be useful to the society. I will enhance my organization to the international level"

- ***Shaik Cheman***
